

# COVID 19

## THE FUTURE OF SPACE DESIGN

2020

# THE “NEW NORMAL”

## HOW OFFICE SPACES WILL ADAPT TO SOCIAL DISTANCING?

The Covid-19 crisis will force swift and permanent changes in both commercial real estate and work culture itself. The office as we know it will never be the same.

From now on every configuration of every floor plan should be assessed to look at distancing and safety.

We have begun to anticipate the time when the shelter-in-place orders are lifted and people start heading back to the office. Those in the midst of planning suggest that the post-pandemic office might look radically different as social distance thinking may be part of our DNA moving forward.

As we go back to work, the new workspace will need to be flexible, modular, and ready to space teams properly. That means rethinking everything about how our future workspaces are designed.

# WHAT CAN WE DO?

## PHYSICAL BARRIERS: *SHORT-TERM OPTIONS*

— ..

### Use of **PLANTS**

Incorporate planters as dividers between users or delimit areas

### Use of **PRIVACY PANELS & PARTITIONS**

Reconfigure your existing stations/desks

### Addition of **STORAGE**

Shared tall storage units can be used as dividers between users

### **MORE SPACE** between desks

**01** Use of Plants

**02** Privacy Panels and Partitions

**03** Add Storage

**04** More Space between Desks

## WHAT CAN WE DO?

# MID-TERM OPTIONS

— ...

**6 feet Certificate:** A certificate stating that measures have been taken to implement a virus-safe working environment.

**6 feet Facility:** A trained employee who advises on and operationally ensures an optimally functioning and safe facility environment.

**6 feet Workstation:** An adapted and fully equipped workplace at which the user can work safely.

**6 feet Quick Scan:** A concise but thorough analysis of the current working environment in the field of virus safety and any other opportunities for improvement.

**6 feet Rules:** A set of simple and clear workable agreements and rules of conduct that put the safety of everyone first.

**6 feet Routing:** A visually displayed and unique routing for each office, making traffic flows completely safe.

## PRIVATE OFFICES

Over the past decade, many companies eliminated private offices in favor of open plans.

From now on we'll also see a trend to more private offices (albeit smaller) and the ability to create space between people.

- 01** Replace Fabric Tackboard with Magnetic Glassboard
- 02** Position Monitor arms in front of user and guest to act as a barrier
- 03** Replace Cushion Top with a cleanable fabric or hard surface top
- 04** Add sanitation caddy/stand for personal use - wipes, hand sanitizer
- 05** Remove or reduce guest seating. Replace with a Poly chair / and or cleanable fabric

# CONFERENCE ROOM

Nowadays Conference Rooms maximize occupancy but should be repurposed.

**YES**

Remove extra conference room chairs and install signage indicating the maximum number of people allowed

**YES**

Technology will need to be upgraded to allow Virtual meetings to be as smooth as a face to face meeting.

# CONFERENCE ROOM

**01** Replace Conference chair with a Poly chair / and or cleanable fabric

**02** Update wall coverings to Laminate / Glass materials.

**03** Add a drawer to hold and sanitation elements - wipes & hand sanitizer

**04** Include Voice controlled Technology to avoid contact with surfaces

**05** Wall mounted TV with Camera and Speakers to allow Virtual Meetings in all conference rooms

# WORKSTATIONS EVOLUTION

## TODAY'S LAYOUT

The typical workstation of a decade ago “the cubicle” was 8 by 8 feet. By 2015, the workstation was down to 6 by 8 feet, and in recent years, the contraction has continued.

## SHORT-TERM LAYOUT

We will see an increase of screens for Personal Protection.

## MID-TERM LAYOUT

Space division and social distancing will be key. All materials need to be cleanable.

## LONG-TERM LAYOUT

Expect companies to give employees more room, such as larger workstations with higher partitions

## WORKSTATIONS

# TODAY'S SOLUTION

To accommodate six feet of social distancing, start with a floor plan indicating the workstations to be occupied, to determine your maximum capacity per floor or wing. Remove chairs or even monitors to discourage unoccupied workstation use.

**YES**

A benching desk with a width of six feet would be consistent with current social distancing guidelines from the Centers for Disease Control and Prevention.

**NO**

The new norm should **not** include rows and rows of tightly packed 48"x24" desks.

## WORKSTATIONS

**SHORT-TERM SOLUTION**

— ..

- 01** Replace the low center screen with a taller and laminate or glass screen barrier.
- 02** Add tall laminate (or hard surface) Gallery Panel as barriers on the corridor sides.
- 03** Replace the shared and open storage for a simplified laminate storage to hold personal belongings
- 04** Remove any shared surface
- 05** Remove cushion top and replace it with a laminate surface

## WORKSTATIONS

**MID-TERM STATIONS**

— ...

**01** Add / Change to a -/+ 50”H Glass, Laminate, or Cleanable Fabric Screen to act as cough / sneeze barrier when standing

**02** Add tall Laminate (or hard surface) Gallery Panel, Individual assigned lockers or planters to the end of each row of furniture.

**03** Add a simplified laminate storage piece that is open (no pulls) to hold personal belongings

**04** Add Drawer to hold Keyboard and Mouse for when the station is not in use.

**05** Add sanitation caddy/stand for personal use - wipes, hand sanitizer.

**06** Add Tall divider screen to sides of the table.

## WORKSTATIONS

**LONG-TERM SOLUTION**

— ...

**01** Higher glass is good! Add this or increase panel height on shorter panels as well.

**02** Replace exterior fabric panels with laminate, metal or closed pore veneer tiles.

**03** Add panel or screen to end of the desk in laminate / hard surface, or cleanable fabric.

**04** Remove Cushion Tops on storage and replace by Steel or Laminate ones

**05** Add a drawer to hold keyboard and mouse for when station is not in use, and sanitation caddy/stand for personal use - wipes, hand sanitizer

**06** Remove tool rail and office supply holders and replace with a hard surface tile.

# TRAINING ROOMS

Locate agile teams into these spaces, relocating furniture to satisfy social distancing requirements.

## TODAY'S LAYOUT

Interactive classroom based upon “hands-on” learning. Classroom design and seating has tended to focus on **creating settings that support “active learning”** co-operative learning and project-based groupings by using mobile tables.

Do “group work” configurations of desks contribute to droplet-based transmission?

**They do.**

## DESIRED LAYOUT

One study of interpersonal processes in the classroom, demonstrates how “a careful management of physical distance between people” can improve classroom climate.

It is a good time to reflect on how this disruptive crisis can help us define what learning should look like

# TRAINING ROOMS

**01** Allow 6 feet personal space.

**02** Add sanitation caddy/stand for personal use - wipes, hand sanitizer

**03** Add power columns for user easy access to power and data.

**04** Chairs should be Poly, Vinyl or Cleanable Fabric

# HUB AREAS

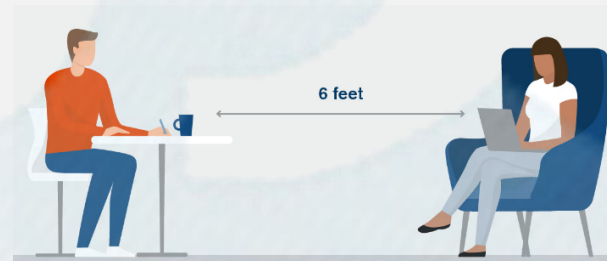

## Social Distancing

In lounge areas, chairs could be placed farther apart. Chairs on casters will permit people to roll seats a safe distance from colleagues

## Automation

Sensor-activated controls may also increase, reducing the number of surfaces that need to be touched.

## New Key Areas

Lounges, cafes and other gathering spaces that sprang up to make collaborative work easier may become even more important if employees do more work from home and commute in for meetings.

Spread out collaboration seating, so people are spaced further apart. And encourage people to collaborate virtually whenever possible.

# HEALTHCARE SPACES

Though hospitals in the midst of the current outbreak can't change their layouts now, they can rethink patient flows, designating separate entrances and waiting areas for suspected covid-19 patients. Furniture will be included as barriers and pop up treatment rooms that can be easily removed.

## CONSULTATION BOOTHS

Polycarbonate booth with steel support structures has an open top and back

## ENCLOSED TRIAGE AREAS

Products should be highly cleanable in order to be easily wiped down in preparation for the next patient

## WAITING AREAS

Laminate Screens and spacing to maintain social distancing

# HEALTHCARE SPACES

- 01** Reception will need to include Protective shield/sneeze guard for intake areas
- 02** Include Technology to allow Virtual Consultation and Medical Deliberation
- 03** Doors with movement sensor to avoid contact with surfaces
- 04** Desks will include laminate screens
- 05** Replace with Poly Chair
- 06** Any seating will need to be plastic or vinyl
- 07** Lounge seating will need to be removed to discourage gathering
- 08** Desk and side Tables will need to be laminate or closed pore wood

# THANK YOU
